Preface .....	vi
<b>Chapter 1 Vector Analysis .....</b>	<b>1</b>
1-1 Terminology and Notation .....	1
1-2 Multiplication of a Vector with a Scalar .....	4
1-3 Addition of Vectors .....	6
1-4 Vector Components .....	10
1-5 Reference Frames, Basis Vectors, and Coordinate Axes .....	18
1-6 Dot-Products .....	23
1-7 Direction Cosines .....	30
1-8 Cross-Products .....	37
1-9 Dyadics .....	42
1-10 Differentiation of Vectors .....	45
<b>Chapter 2 Kinematics .....</b>	<b>49</b>
2-1 Simple Rotations .....	49
2-2 Order of Rotations .....	62
2-3 Euler Parameters .....	75
2-4 Orientation Angles .....	95
2-5 Angular Velocity .....	114
2-6 Angular Acceleration .....	135
2-7 Velocity and Acceleration .....	139
<b>Chapter 3 Mass Distribution .....</b>	<b>153</b>
3-1 Mass Centers .....	153
3-2 Inertia Dyadics .....	170
3-3 Principal Moments of Inertia; Principal Axes .....	193

## CONTENTS

<b>Chapter 4 Forces and Moments . . . . .</b>	<b>206</b>
4-1 Moment about a Point . . . . .	206
4-2 Couples and Torques . . . . .	219
4-3 Equivalence and Replacement . . . . .	224
4-4 Gravitational Forces . . . . .	227
4-5 Spring Forces . . . . .	245
4-6 Friction Forces . . . . .	248
<b>Chapter 5 Kane's Dynamical Equations . . . . .</b>	<b>257</b>
5-1 Generalized Speeds . . . . .	257
5-2 Degrees of Freedom; Degrees of Specified Motion; Degrees of Movement . . . . .	269
5-3 Partial Angular Velocities and Partial Velocities . . . . .	270
5-4 Generalized Inertia Forces . . . . .	276
5-5 Generalized Active Forces. . . . .	289
5-6 Formulating Kane's Dynamical Equations . . . . .	298
5-7 Newtonian Reference Frames . . . . .	303
5-8 Bringing Noncontributing Forces into Evidence . . . . .	322
5-9 Momentum and Energy Integrals for Checking Equations of Motion . . . . .	331
<b>Problems . . . . .</b>	<b>366</b>
Problem Set 1 . . . . .	366
Problem Set 2 . . . . .	392
Problem Set 3 . . . . .	424
Problem Set 4 . . . . .	447
Problem Set 5 . . . . .	462
<b>Index . . . . .</b>	<b>490</b>
