

# Contents

<b>1</b>	<b>What is a dynamic system?</b>	<b>1</b>
1.1	Important concepts in dynamic systems . . . . .	1
1.2	High-level objectives of this textbook . . . . .	2
1.3	Skills taught in this textbook . . . . .	2
1.4	MIPSI: A procedure for studying dynamic systems . . . . .	2
<b>2</b>	<b>Math review</b>	<b>3</b>
2.1	Why math is important . . . . .	3
2.2	Mathematical operations . . . . .	4
2.2.1	Order of operations: Established mathematical convention? . . . . .	5
2.2.2	Patterns in mathematics . . . . .	5
2.3	Unit systems - SI and U.S. . . . .	6
2.4	Geometry: Ancient Euclid and modern vectors . . . . .	6
2.5	Circles and their properties . . . . .	6
2.6	Triangles and ratios of their sides (sine, cosine, tangent) . . . . .	7
2.6.1	Properties of sine and cosine and useful trigonometric formulas . . . . .	7
2.6.2	Sine and cosine as functions (Euler, circa 1730) . . . . .	8
2.6.3	The amplitude-phase formulas for sine and cosine . . . . .	9
2.6.4	The function <code>atan2(y, x)</code> . . . . .	9
2.6.5	Optional: The sinc function . . . . .	9
2.7	Types of scalars: Variable, Specified, Constant . . . . .	9
2.8	Differentiation . . . . .	10
2.8.1	Definition of an ordinary derivative of a scalar function . . . . .	10
2.8.2	Definition of a partial derivative of a scalar function . . . . .	10
2.8.3	Definition of the differential of an independent variable and scalar function . . . . .	10
2.8.4	Definition of the total derivative of a scalar function . . . . .	11
2.8.5	Short table of derivatives frequently encountered in engineering . . . . .	11
2.8.6	Example: Partial and ordinary differentiation . . . . .	11
2.8.7	Good product rule for differentiation (for scalars, vectors, matrices, . . .) . . . . .	12
2.8.8	Quotient rule for derivatives: Use exponents and the product rule . . . . .	12
2.8.9	Chain rule for derivatives . . . . .	12
2.8.10	Implicit differentiation: A useful tool for calculating derivatives . . . . .	12
2.9	Integration and a short table of integrals . . . . .	12
2.10	Solutions of <i>polynomial</i> equations (roots) . . . . .	13
2.11	Optional: Continuous solutions of <i>nonlinear</i> algebraic equations . . . . .	14
2.12	Optional: Proofs . . . . .	14
2.12.1	Proof of the addition formula for the sine function . . . . .	14
2.12.2	Geometrical proof of eqn (21), the amplitude-phase trigonometric identity . . . . .	14
2.12.3	Trigonometric proof of eqn (21), the amplitude-phase trigonometric identity . . . . .	15

<b>3</b>	<b>Introduction to differential equations</b>	<b>17</b>
3.1	Motivating example: Chaotic plate pendulum (see examples in Hw 2)	17
3.2	Why we care about differential equations	18
3.3	Classification of differential equations	18
3.4	Independent, dependent, and specified variables	18
3.5	Classification of algebraic and differential equations	19
3.6	Example of classification of differential equations	21
3.7	What is a vibration?	22
3.8	Solution techniques for ordinary differential equations (ODEs)	22
3.9	Optional: Numerical solution of ODEs - concepts	22
	Summary of ODE methods	23
<b>4</b>	<b>Separation of variables &amp; 1<sup>st</sup>-order ODEs</b>	<b>25</b>
4.1	Separation of variables and integration	25
4.1.1	Example: Separation of variables and integration to solve a 1 <sup>st</sup> -order ODE	25
4.1.2	Finding a value for the undetermined constant $C$	26
4.1.3	Example: Olympic swimming via separation of variables	26
4.2	Time constant	27
4.3	Assumed solution $y(t) = C e^{pt}$ for homogeneous, 1 <sup>st</sup> -order, ODEs	28
4.3.1	Example: Olympic swimming via assumed solution	29
4.3.2	Example: The biology of life	29
4.4	Optional: The origins of $e$	30
4.4.1	Optional: An amazing property of the exponential function $e^t$	30
4.4.2	Optional: Mathematical connections with $e$	31
4.4.3	Optional: $e$ is for Euler, $e$ is for engineer, $e$ is for excellent	31
<b>5</b>	<b>Second-order, homogeneous, ODEs</b>	<b>33</b>
5.1	Analytical techniques for solving ODEs (see examples in Hw 3)	33
5.2	Analytical solutions of homogeneous, second-order, ODEs	33
5.3	Euler's formula for $e^{i\theta}$ - memorize!	34
5.4	Example: <i>Undamped</i> , homogeneous, second-order, ODE	35
5.5	Mathematical and physical significance of $\zeta$ , $\omega_n$ , and $\omega_d$	35
5.6	Example: Bungee jumping	36
5.7	Solution process for linear, 2 <sup>nd</sup> -order, ODEs	37
5.7.1	Solution process for linear, $n^{\text{th}}$ -order, constant-coefficient ODEs	37
5.7.2	Derivation of solution for <i>undamped</i> , second-order, ODE	37
5.7.3	Optional: Derivation of solution for <i>critically-damped</i> ODE	38
<b>6</b>	<b>Time specifications for 2<sup>nd</sup>-order ODEs</b>	<b>39</b>
6.1	Period of vibration	39
6.2	Step response and time-specifications	40
6.3	Decay ratio and logarithmic decrement	41
6.4	Rise time	41
6.5	Peak time and maximum overshoot	42
6.6	Settling ratio and settling time	42
6.7	Example: Laboratory data and time specifications	43
<b>7</b>	<b>Roots, root locus, and <math>e^{pt}</math></b>	<b>45</b>
7.1	Properties of $e^{pt}$ ( $p$ is a constant and $t$ is time)	45
7.2	Roots of polynomials and the Fundamental Theorem of Algebra	47
7.3	Roots of polynomials and stability	47
7.4	Necessary condition for a polynomial to have negative roots	47

7.5	What is a root locus? . . . . .	49
7.6	Why use a root locus? . . . . .	49
7.7	Root locus for $2^{nd}$ -order ODE (for $m$ , $b$ , or $k$ ) . . . . .	49
7.8	$2^{nd}$ -order ODEs: Relationship between $\zeta$ , $\omega_n$ , and poles . . . . .	52
7.9	Roots of a $5^{th}$ -order polynomial with MATLAB <sup>®</sup> or MotionGenesis . . . . .	53
7.10	Optional: Drawing a root locus with MATLAB <sup>®</sup> . . . . .	53
<b>8</b>	<b>Dynamics: Laws of motion</b> . . . . .	<b>55</b>
8.1	Newton's law of motion for a particle . . . . .	55
8.2	Newton's equation for a system . . . . .	55
8.3	Euler's equation for a rigid body with simple angular velocity . . . . .	55
	Summary of dynamics equations . . . . .	56
<b>9</b>	<b>Power/energy-rate principle</b> . . . . .	<b>57</b>
9.1	Power of a force, set of forces, or torque on a rigid body . . . . .	58
9.2	Forces that do not contribute to power (workless forces) . . . . .	59
9.3	Power/energy-rate for a commercial spring scale . . . . .	59
9.4	Optional: Kinetic energy . . . . .	60
9.4.1	Kinetic energy of a particle . . . . .	60
9.4.2	Kinetic energy of a rigid body with a simple angular velocity . . . . .	60
<b>10</b>	<b>Inhomogeneous ODEs</b> . . . . .	<b>61</b>
10.1	Analytical solutions of an <i>inhomogeneous</i> , $1^{st}$ -order ODE . . . . .	62
10.2	Two techniques for finding a particular solution $y_p(t)$ . . . . .	62
10.3	Integral technique for particular solution to $1^{st}$ -order ODE . . . . .	62
10.4	Table of assumed particular solutions (inhomogeneous ODEs) . . . . .	63
10.5	Steady-state and transient parts of $y(t)$ . . . . .	63
10.6	Example: Speed of a parachutist . . . . .	64
10.6.1	Homogeneous solution (from Chapter 4) . . . . .	64
10.6.2	Integral technique for particular solution . . . . .	64
10.6.3	Assumed particular solution technique (use table in Section 10.4) . . . . .	64
10.6.4	Steady-state and transient parts of $v(t)$ . . . . .	65
10.7	Analytical solutions of an <i>inhomogeneous</i> , $2^{nd}$ -order, ODE . . . . .	65
10.8	Integral technique for particular solution to $2^{nd}$ -order ODE . . . . .	66
10.9	Example: Undamped, <i>inhomogeneous</i> , $2^{nd}$ -order, ODE . . . . .	66
10.9.1	Integral solution to <i>inhomogeneous</i> , $2^{nd}$ -order, ODE from equation (13) . . . . .	66
10.9.2	Assumed solution to <i>inhomogeneous</i> , $2^{nd}$ -order, ODE . . . . .	66
10.9.3	Steady-state and transient solutions of an undamped ODE . . . . .	67
10.10	Stability of homogeneous and inhomogeneous ODEs . . . . .	67
10.11	Optional: Derivation for an <i>inhomogeneous</i> , $1^{st}$ -order, ODE . . . . .	68
<b>11</b>	<b>Harmonic forcing, steady-state, and transient response</b> . . . . .	<b>69</b>
11.1	Underdamped harmonically-forced vibrations (see examples in Hw 6) . . . . .	69
11.2	Steady state and transient parts of $y(t)$ . . . . .	69
11.3	Properties of the steady-state response with harmonic forcing . . . . .	70
11.4	Example: Dynamic response of a building in an earthquake . . . . .	71
11.5	Undamped harmonically-forced vibrations . . . . .	72
11.5.1	Resonance and undamped harmonically-forced vibrations . . . . .	72
11.5.2	The beat phenomenon for undamped vibrations . . . . .	72

<b>12 Motors, sensors, and electrical circuits</b>	<b>73</b>
12.1 DC (direct current) permanent magnet motors . . . . .	75
12.2 Electrical current . . . . .	75
12.3 Voltage and its units . . . . .	75
12.4 Definitions of series and parallel electrical elements . . . . .	76
12.5 Example: Motor circuit . . . . .	76
<b>13 Complex numbers</b>	<b>81</b>
13.1 Definition of a complex number and equivalent complex numbers . . . . .	82
13.2 Complex conjugate . . . . .	83
13.3 Complex number addition and subtraction . . . . .	83
13.4 Complex number multiplied (or divided) by a real number . . . . .	83
13.5 Complex number multiplied by a complex number . . . . .	84
13.6 Exponentiation and complex numbers . . . . .	84
13.7 Complex number divided by a complex number . . . . .	85
13.8 Optional: Complex numbers and other mathematical functions . . . . .	85
13.9 Optional: Complex numbers and 2D (planar) vectors . . . . .	86
<b>14 Laplace transforms</b>	<b>87</b>
14.1 What is time $t$ and the Laplace variable $s$ ? . . . . .	87
14.2 What is a Laplace transform? . . . . .	87
14.3 Why use a Laplace transform – connections to <u>linear</u> ODEs . . . . .	88
14.4 Complex functions and transfer functions . . . . .	89
14.5 Poles and zeros of a transfer function . . . . .	89
14.6 Bode plots: Visualizing frequency response . . . . .	89
14.7 Sinusoidal transfer function and harmonic forcing . . . . .	90
14.8 Thinking in $s$ and $t$ (also see Homework 8.7) . . . . .	91
14.9 Optional: Final value theorem . . . . .	91
14.10 Example: An RC circuit as a filter (output voltage) . . . . .	92
<b>15 PID control of dynamic systems</b>	<b>95</b>
15.1 What is a control system? (see examples in Hw 8, 9) . . . . .	95
15.2 Bio-dynamic control systems in the human body . . . . .	95
15.3 Conceptual overview of control system design . . . . .	95
15.4 Control system design for a linear ODE . . . . .	96
15.5 Block diagrams and control system components . . . . .	96
15.6 What is PID control? . . . . .	96
15.7 Cruise control for a simple car model . . . . .	96
15.7.1 Proportional (P) feedback control for a simple car model . . . . .	97
15.7.2 Proportional-Integral (PI) cruise control for a simple car model . . . . .	98
15.8 Cruise control for an improved car model . . . . .	98
<b>16 Linearization and small approximations</b>	<b>99</b>
16.1 Approximating products, powers, functions (examples in Hw 11) . . . . .	99
16.2 Example: Linearization of a particle sliding on a beam . . . . .	99
16.3 Why linearize? . . . . .	100
16.4 Simplification and solution of the classic particle pendulum . . . . .	100
16.5 Simplification and solution of the <i>inverted</i> particle pendulum . . . . .	101
16.6 Further investigation of small angle approximations . . . . .	102

<b>17 Optional: Linearization and Taylor series</b>	<b>103</b>
17.1 Taylor series expansion in a single variable . . . . .	103
17.2 Multi-variable Taylor series expansion . . . . .	104
17.3 Linearization of a function . . . . .	104
17.4 Linearization of ordinary differential equations . . . . .	105
17.5 Example: Linearization and stability of particle pendulum ODE . . . . .	105
17.6 Example: Linearization of ODEs for a swinging spring . . . . .	107
17.7 Optional: Motivating/proving the Taylor series . . . . .	109
<b>18 Optional: Fitting data to functions</b>	<b>111</b>
18.1 Fitting periodic data with Fourier Transforms . . . . .	111
<b>19 Matrices and <math>AX = B</math></b>	<b>115</b>
19.1 Motivating question: Solving <u>one</u> linear algebraic equation . . . . .	115
19.2 Why use matrices – getting organized . . . . .	115
19.3 What is a matrix? . . . . .	115
19.4 Row and column matrices . . . . .	116
19.5 Addition of matrices . . . . .	116
19.6 Multiplication of a matrix with a scalar . . . . .	116
19.7 Multiplication of matrices . . . . .	116
19.8 The zero matrix and the identity matrix . . . . .	116
19.9 Transpose of a matrix . . . . .	117
19.10 Submatrices of a matrix . . . . .	117
19.11 Determinant of a matrix, minors and cofactors . . . . .	117
19.12 Adjugate matrix (or classical adjoint matrix) . . . . .	118
19.13 Inverse of a matrix . . . . .	119
19.14 Changing linear algebraic equations into matrix equations . . . . .	119
19.15 Solving sets of linear algebraic equations . . . . .	120
19.16 Optional: Pseudo-inverse solutions . . . . .	120
19.17 Partial and ordinary derivative of a matrix . . . . .	120
19.18 Optional: Other matrices and their properties . . . . .	121
19.19 Optional: A history of matrices and determinants . . . . .	121
<b>20 Eigenvalues and eigenvectors</b>	<b>123</b>
20.1 Recognize and remember: Solving an eigenvalue problem . . . . .	123
20.2 Motivating questions for eigenvalues and eigenvectors . . . . .	123
20.3 Solving the standard algebraic eigenvalue problem . . . . .	125
20.3.1 Special eigenvalues for the $n \times n$ matrix $A$ . . . . .	125
20.3.2 Eigenvalues and the roots of a polynomial . . . . .	125
20.4 Situations when $\text{Matrix}(\lambda)$ is nonlinear in $\lambda$ . . . . .	126
20.5 The generalized eigenvalue problem . . . . .	127
<b>21 Coupled, linear, 1<sup>st</sup>-order ODEs</b>	<b>129</b>
21.1 Solutions of <i>coupled</i> , linear, constant-coefficient 1 <sup>st</sup> -order ODEs . . . . .	129
21.2 Molecular dynamics: RNA folding and <i>coupled</i> 1 <sup>st</sup> -order ODEs . . . . .	130
<b>22 Matrix form of <i>coupled</i>, 2<sup>nd</sup>-order, linear, ODEs</b>	<b>133</b>
22.1 Model, identifiers, and physics of a two rotor system . . . . .	133
22.2 Matrix form of <i>coupled</i> , linear, second-order, ODEs . . . . .	134

<b>23 Undamped coupled 2<sup>nd</sup>-order ODEs</b>	<b>135</b>
23.1 Physical insights into eigenvalues and eigenvectors of a slinky . . . . .	135
23.2 Analytical solutions of <i>undamped, coupled</i> , ODEs . . . . .	136
23.3 <i>Undamped, coupled</i> , ODEs for two rotor system . . . . .	137
23.4 Relationship to standard algebraic eigenvalue problem . . . . .	139
23.5 Mode dance . . . . .	140
<b>24 State-space and damped, coupled, ODEs</b>	<b>141</b>
24.1 Generalized eigenvalue solutions of <i>damped, coupled</i> , ODEs . . . . .	141
24.2 Standard eigenvalue problem: Alternate solution technique . . . . .	142
24.3 <i>Damped, coupled</i> , ODEs for two rotor system . . . . .	143
<b>25 State-space feedback control</b>	<b>145</b>
25.1 Motivating example: Balancing an inverted pendulum . . . . .	145
25.2 State-space feedback control for <i>coupled</i> , linear, 1 <sup>st</sup> -order ODEs . . . . .	145
25.3 Solution for $Y(t)$ with state-space control . . . . .	146
25.4 State space feedback control of coupled 2 <sup>nd</sup> -order ODEs . . . . .	146
<b>26 Feed-forward control</b>	<b>147</b>
26.1 Feed-forward control for directly controlling $Q$ or $U$ . . . . .	148
26.1.1 Example: Feed-forward control of a rocket sled's <u>velocity</u> . . . . .	148
26.1.2 Example: Feed-forward control of rocket sled's <u>position</u> . . . . .	149
26.1.3 Example: Feed-forward control with additional actuator . . . . .	150
26.2 Derivation/insights into the mathematics of feed-forward control . . . . .	151
<b>Homework</b>	<b>155</b>
Homework 1: Geometry and calculus . . . . .	155
Homework 2: Uncoupled 1 <sup>st</sup> -order ODEs . . . . .	163
Homework 3: Uncoupled 2 <sup>nd</sup> -order ODEs (vibrations) . . . . .	175
Homework 4: Time specifications for ODEs and control . . . . .	183
Homework 5: $\vec{F} = m\vec{a}$ : Equations of motion and ODEs for mechanical systems . . . . .	189
Homework 6: Inhomogeneous ODEs and harmonic forcing . . . . .	203
Homework 7: Root locus . . . . .	213
Homework 8: Complex numbers, circuits, Laplace transforms, frequency response . . . . .	219
Homework 9: Optional: Circuits, Laplace transforms, frequency response . . . . .	227
Homework 10: PID control of electromechanical systems . . . . .	235
Homework 11: Linearizing ODEs . . . . .	245
Homework 12: Matrices and linear algebra . . . . .	253
Homework 13: Coupled ODEs . . . . .	255
Homework 14: State-space, coupled ODEs, and control . . . . .	263
<b>Working Model simulations/labs (www.MotionGenesis.com <math>\Rightarrow</math> Textbooks <math>\Rightarrow</math> Resources)</b>	<b>1</b>
