Dynamics – what does it do for us?	i
Newton’s three laws	ii
1 Math review	1
1.1 Unit systems - SI and U.S.	1
1.2 Geometry: Ancient Euclid and modern vectors	2
1.3 Circles and their properties	2
1.4 Triangles and ratios of their sides (sine, cosine, tangent)	2
1.4.1 Properties of sine and cosine and useful trigonometric formulas	3
1.4.2 Sine and cosine as functions (Euler, circa 1730)	3
1.5 Types of scalars: Variable, Specified, Constant	3
1.6 Differentiation	4
1.6.1 Definition of an ordinary derivative of a scalar function	4
1.6.2 Definition of a partial derivative of a scalar function	4
1.6.3 Definition of the total derivative of a scalar function	4
1.6.4 Short table of derivatives frequently encountered in engineering	5
1.6.5 Example: Partial and ordinary differentiation	5
1.6.6 Good product rule for differentiation (for scalars, \vec{v} ectors, matrices, . . .)	5
1.6.7 Quotient rule for derivatives: Use exponents and the product rule	5
1.6.8 Chain rule for derivatives	5
1.6.9 Implicit differentiation: A useful tool for calculating derivatives	6
1.7 Integration and a short table of integrals	6
1.8 Solutions of <i>polynomial</i> equations (roots)	7
1.9 Optional: Continuous solutions of <i>nonlinear</i> algebraic equations	7
2 Vectors	9
2.1 Examples of scalars, vectors, and dyadics	9
2.2 Definition of a vector	10
2.3 Zero vector $\vec{0}$ and its properties	10
2.4 Unit \hat{v} ectors	11
2.5 Equal vectors (=)	11
2.6 Vector addition (+)	11
2.7 Vector multiplied or divided by a scalar (* or /)	12
2.8 Vector negation and subtraction (-)	12
2.9 Vector dot product (\cdot)	13
2.9.1 Properties of the dot-product (\cdot)	13
2.9.2 Uses for the dot-product (\cdot)	13
2.9.3 Special case: Dot-products with orthogonal unit vectors	14
2.9.4 Examples: Vector dot-products (\cdot)	14
2.9.5 Dot-products to change vector equations to scalar equations (see Hw 1.31)	14
2.10 Vector cross product (\times)	15

2.10.1	Properties of the cross-product (\times)	15
2.10.2	Uses for the cross-product (\times)	15
2.10.3	Special case: Cross-products with right-handed, orthogonal, unit vectors	16
2.10.4	Examples: Vector cross-products (\times)	16
2.11	Optional: Scalar triple product $(\cdot \times$ or $\times \cdot)$	17
2.11.1	Scalar triple product and the volume of a tetrahedron	17
2.11.2	$(\times \cdot)$ to change vector equations to scalar equations (see Hw 1.31)	17
3	Position vectors and vector geometry	19
3.1	Position of a point (or particle) (see examples in Hw 3)	19
3.2	Distance	20
3.3	Example: Cable lengths, angles, surface area (orthogonal walls)	21
4	Vector basis	23
4.1	What is a vector basis?	23
4.2	Expressing a vector in terms of basis $\vec{a}_1, \vec{a}_2, \vec{a}_3$	23
4.3	Concept: What is the vector vs. how is it expressed	24
5	Rotation matrices	25
5.1	Uses for the rotation matrix ${}^aR^b$ (for geometry, statics, motion analysis, stress ...)	25
5.2	Simple rotation matrix examples	26
5.2.1	Example: Calculating angles between unit vectors $\hat{a}_x, \hat{a}_y, \hat{a}_z$ and $\hat{b}_x, \hat{b}_y, \hat{b}_z$	26
5.2.2	Example: Calculation of rotation matrix inverse (use transpose)	26
5.2.3	Example: Rotation matrix for express, dot, and cross	26
5.3	Forming rotation matrices and matrix multiplication	27
5.3.1	Example: Forming the simple rotation matrix ${}^aR^n$	27
5.3.2	Hug rule (a pattern for quickly forming simple rotation matrices)	27
5.3.3	Example: Forming the simple rotation matrix ${}^bR^a$	28
5.3.4	Example: Rotation matrix multiplication to form ${}^bR^n = {}^bR^a * {}^aR^n$	28
5.4	What is an angle?	29
6	Vector differentiation	31
6.1	Differentiation concepts: Changes in magnitude and direction	31
6.2	Ordinary derivative of a vector in a rigid basis (or reference frame)	32
6.3	Constant vectors (vectors fixed in a reference frame)	32
6.4	Properties of ordinary <u>or</u> partial derivatives of vectors	32
6.5	Example: Derivatives of a vector	33
7	Angular velocity & angular acceleration	35
7.1	Angular velocity concepts: Moon and Earth celestial systems	35
7.2	What is a reference frame?	36
7.3	Angular velocity and the golden rule for vector differentiation	37
7.3.1	Example: Angular velocity and vector differentiation	37
7.3.2	Example: Vector differentiation and angular momentum – spinning book	37
7.3.3	Simple angular velocity	38
7.3.4	Angular velocity negative property	38
7.3.5	Angular velocity addition theorem	38
7.3.6	Angular velocity example: Chaotic plate pendulum	39
7.4	Angular acceleration	39
7.5	Optional: Angular velocity proofs	40
7.5.1	Proof of angular velocity and orthogonal basis vectors	40
7.5.2	Proof of simple angular velocity	40

7.5.3	Proof of angular velocity addition theorem	41
7.5.4	Proof of angular velocity negative property	41
8	Points: Velocity and acceleration	43
8.1	Definition of a point's velocity and acceleration	43
8.2	Velocity and acceleration of two points <u>fixed</u> on a rigid body	45
8.3	Relationship between distance, position, velocity, and acceleration	46
8.3.1	Constant acceleration in a reference frame N – a special case	46
8.3.2	Constant acceleration along a curve	46
8.3.3	Circular motion	46
8.3.4	Analogy between translational motion and 2D rotational motion	46
8.3.5	Example: Free-fall of a sky-diver with constant downward acceleration	47
8.4	Speed and distance-traveled in a reference frame (see Hw 9.9)	47
8.5	Optional: Acceleration vocabulary	48
8.6	Optional: Effect of g's on human health (biomechanics)	48
8.7	Optional: Velocity and acceleration proofs	49
9	Constraints: Rods, rolling, gears, . . .	51
9.1	Rods, ropes, and separators	51
9.2	Linear actuator	51
9.3	Ball and socket joint	52
9.4	Revolute joint (also called a hinge or pin joint)	52
9.5	Revolute motor (revolute joint with additional angular constraint)	52
9.6	Prismatic joint (also called a slider joint or square-slot joint)	52
9.7	Contact (an intermittent inequality constraint)	53
9.8	Sliding and rolling (a special type of contact)	53
9.9	Gears and constraint equations	54
10	Particles (points with mass)	57
10.1	System of particles	58
10.2	Translational (linear) momentum for particles	58
10.3	Angular momentum and shift theorem for particles	59
10.4	Kinetic energy for particles	60
10.5	Example: Momentum and energy for an infant on a swing	61
10.6	Forming and solving $\vec{\mathbf{F}} = m \vec{\mathbf{a}}$ for translational motion	62
10.7	Example: Velocity, acceleration, and $\vec{\mathbf{F}} = m \vec{\mathbf{a}}$	63
10.8	Optional: Proofs for translational/angular momentum	64
10.8.1	Proof of translational momentum of a system of particles	64
10.8.2	Proof of shift theorem for angular momentum	64
11	Mass, center of mass, centroid	65
11.1	Mass	65
11.2	Center of mass and centroid	65
11.3	Optional: Figures and their length, area, and volume	67
11.4	Optional: Integrals for mass, center of mass, and centroid	67
11.5	Experiments, tables, CAD/CAE, and medical scanning	68
11.6	Optional: Measuring mass	68
11.7	Optional: The language and etymology of “mass”	68

12 Concepts: Moments/products of inertia	69
12.1 Moment of inertia (also see Section 14.2)	69
12.1.1 Example: Moments of inertia of a particle	70
12.1.2 Conceptual example of moments of inertia	70
12.1.3 Demonstration: Effect of moment of inertia on a rolling cylinder	70
12.1.4 Demonstration: Effect of moment of inertia on a spinning book	70
12.1.5 Shift theorem for moment of inertia (parallel axis theorem)	71
12.2 Products of inertia (also see Section 14.3)	71
12.2.1 Example: Products of inertia of a particle	71
12.2.2 Conceptual example of products of inertia (also see Homework 10.6)	72
12.2.3 Demo: Effect of product of inertia on a rattleback (wobblestone)	72
12.2.4 Optional: Differences in opinion about product of inertia	72
13 Dyadics	73
13.1 Dyadic properties (vector * vector, dot-products, zero and unit dyadics, derivative)	74
13.2 Dyadics and matrices	75
13.3 Dyadic symmetry	75
14 Inertia dyadics	77
14.1 Inertia dyadic: A “suitcase” for moments and products of inertia	77
14.1.1 Inertia dyadic for a particle or system	77
14.1.2 Shift theorem for an inertia dyadic (for an arbitrary system S)	77
14.1.3 Example: Inertia dyadic of a particle (also see example in Section 14.5)	78
14.2 Moments of inertia and inertia dyadics (also see Section 12.1)	78
14.3 Products of inertia and inertia dyadics (also see Section 12.2)	79
14.4 Inertia matrix (a symmetric matrix)	79
14.5 Example: Inertia properties for an infant on a swing	80
14.6 Example: Mass properties of three particles on a parallelepiped	81
14.7 Optional: Motivating concepts for inertia dyadics	82
15 Rigid bodies	83
15.1 What is a rigid body? (see examples in Hw 11)	83
15.2 Angular momentum of a rigid body B about a point <u>fixed</u> on B	84
15.2.1 Angular momentum for a rigid body with simple angular velocity (2D)	84
15.2.2 Reminder: Shift theorem for angular momentum of a rigid or flexible body B	84
15.3 Kinetic energy of a rigid body	85
15.3.1 Kinetic energy special case: When point B_p is B_{cm}	85
15.3.2 Kinetic energy of a rigid body with simple angular velocity (2D)	85
15.3.3 Example: Kinetic energy of inverted pendulum on cart	86
15.4 Examples with an airplane (simple model)	86
15.4.1 Translational momentum and angular momentum of an airplane in N	86
15.4.2 Kinetic energy of an airplane (B 's kinetic energy in N)	86
15.5 Optional: Proof of angular momentum for a rigid body B	87
15.6 Optional: Proof of kinetic energy for a rigid body	88
16 Force and resultant	89
16.1 Force and the law of action/reaction	89
16.2 Statics, dynamics, and resultant forces	90
16.3 Resultant of a set of vectors (e.g., forces on a point, body, or system)	90
16.4 Resultant force on a system (internal force cancellation)	90
16.5 Contact and distance forces	91
16.6 Applied and constraint forces	91

16.7	Optional: The definition and philosophy of force	91
17	Moments and torque	93
17.1	Moment of a vector	93
17.1.1	Moment of a set of vectors	93
17.1.2	Shift theorem for the moment of a set of vectors	93
17.1.3	$\hat{\mathbf{u}} \cdot \vec{\mathbf{M}}^{S/P} = \hat{\mathbf{u}} \cdot \vec{\mathbf{M}}^{S/O}$ if $\hat{\mathbf{u}}$ is parallel to line \overline{OP} (useful for MG road-maps in Section 20.5)	94
17.1.4	Moment arm of a vector about a point (example at end of Section 17.6)	94
17.2	Moment of internal forces	94
17.3	Statics, dynamics, and moments of forces	94
17.4	Definition of static equilibrium	94
17.5	Torque of a set of vectors (moment of a couple)	95
17.6	Neuromuscular biomechanics example: Muscle tension for curling	96
17.7	Optional: Proof of shift theorem for moment of a set of vectors	98
17.8	Optional: Minimum moment magnitude and central axis (wrench)	98
18	Replacement of forces and bound vectors	99
18.1	Replacement of distance forces (not a unique process)	99
18.2	Replacement of contact forces	100
18.3	Equivalence, replacement, and flexible bodies	100
18.4	Replacement of forces associated with constraints	101
19	Encyclopedia of applied force and torque	103
19.1	Weight, mass, and gravity	103
19.2	Uniform gravity on a particle or body (see appendix for g for planets)	103
19.3	Universal gravitational attraction between two particles	104
19.4	Electrostatic forces and Coulomb's law for charged particles	105
19.5	DC (direct current) permanent magnet motors	105
19.6	Kinetic friction and the Continuous Friction Law	106
19.7	Translational spring between two points	107
19.8	Rotational (torsional) spring	107
19.9	Translational damper between two points	108
19.10	Rotational (torsional) damper	108
19.11	Light linear springs and dampers in <i>series</i>	109
19.12	Light linear springs and dampers in <i>parallel</i>	109
19.13	Viscous damper between two surfaces	110
19.14	Fluid forces (lift and drag)	110
19.14.1	Demo: Experimental determination of drag forces on a coffee filter	111
19.14.2	Closed-form solutions with aerodynamic drag	111
19.15	Aerodynamic forces on a baseball - a case study in philosophy	112
19.15.1	Drag force on a baseball having magnitude $b\vec{\mathbf{v}}_{\text{rel}}^2$	112
19.15.2	Lift (Magnus) force on a baseball	113
19.15.3	Aerodynamic torque on a baseball	114
19.15.4	Differences in aerodynamic models	114
19.16	Optional: Proofs for spring and gravity forces	115
19.16.1	Optional: Proof of light linear springs and dampers in <i>series</i>	115
19.16.2	Optional: Proof of light linear springs and dampers in <i>parallel</i>	115
19.16.3	Optional: Proof for uniform gravity on a body or set of particles	115

20 Dynamics: Laws of motion	117
20.1 Newton’s law of motion for a particle	118
20.2 Newton’s equation for a system	118
20.3 Translational momentum principle	118
20.4 Angular momentum principle	118
20.5 MG road-maps for efficient statics and dynamics	119
20.5.1 MG road-map: Projectile motion (2D)	120
20.5.2 MG road-map: Rigid body pendulum (2D)	120
20.5.3 MG road-map: Inverted pendulum on cart (x and θ) (2D)	120
20.5.4 MG road-map: Rotating rigid body (3D)	121
20.5.5 MG road-map: Bridge crane equations of motion (2D)	121
20.5.6 MG road-map: Particle on spinning slot (2D)	121
20.5.7 MG road-map: Motion of a chaotic double pendulum (3D)	122
20.5.8 MG road-map: Particle pendulum (2D) – angle and tension	122
20.6 Optional: Euler’s equations for a rigid body (3D)	123
20.7 Optional: Lagrange’s equations of the second kind	123
20.8 Impulse/momentum	124
20.9 Conservation of momentum	124
20.10 Optional: Proof: Translational momentum principle ($\vec{\mathbf{F}}^S = m^S * {}^N\vec{\mathbf{a}}^{S_{cm}}$)	125
20.11 Optional: Proof: Angular momentum principle	125
21 Power and work	129
21.1 Power/energy-rate principle (for any system S in a Newtonian frame N).	129
21.2 Power of a force, set of forces, or torque on a rigid body	131
21.3 Forces that do not contribute to power (workless forces)	131
21.4 Power/energy-rate to size a torque-motor	131
21.5 Power/energy-rate for a commercial spring scale	132
21.6 Definition of work with an integral or differential equation	133
21.7 Work/energy principle	134
21.8 Optional: Proofs with power	134
21.8.1 Optional: Proof of the power/energy-rate principle	134
21.8.2 Optional: Proof for power of a set of forces (or <u>torque</u>) on a rigid body B	135
22 Potential energy	137
22.1 Work/Energy principle	137
22.2 Conservation of mechanical energy (special case of work/energy)	137
22.3 Potential energy - a special type of work for “conservative” forces	138
22.3.1 Potential energy for a constant force or a uniform gravitational field	138
22.3.2 Potential energy for central forces (e.g., springs and inverse-square-law gravity)	139
22.3.3 Potential energy for a simple rotational spring	139
22.4 Optional: Proofs of potential energy	140
22.4.1 Optional: Proof of potential energy for a constant force in reference frame N	140
22.4.2 Optional: Proof of potential energy for a central force	140
23 MIPS: Classic particle pendulum	141
23.1 Modeling the classic particle pendulum	141
23.2 Identifiers for the classic particle pendulum	142
23.3 Physics: Equations of motion of the classic particle pendulum	143
23.3.1 $\vec{\mathbf{F}} = m\vec{\mathbf{a}}$ for the classic particle pendulum	143
23.3.2 Angular momentum principle for the classic particle pendulum	144
23.3.3 Euler’s rigid body equation for the classic particle pendulum	144
23.3.4 Kinetic energy for the classic particle pendulum	145

23.3.5	Power/energy-rate principle for the classic particle pendulum	145
23.3.6	Conservation of mechanical energy for the classic particle pendulum	146
23.3.7	Lagrange’s method for the classic particle pendulum	146
23.4	Solution of the classic particle pendulum ODE	146
23.4.1	Numerical solution of pendulum ODE via MotionGenesis and/or MATLAB [®]	146
23.4.2	Analytical (closed-form) solution of the classic particle pendulum ODE	147
23.4.3	Simplification and analytical solution of the classic particle pendulum ODE	147
23.5	Interpretation of results for the classic particle pendulum	147
24	Example: Inverted pendulum on cart	149
24.1	Kinematics (space and time)	149
24.2	Rotation matrix, angular velocity, angular acceleration	150
24.3	Position vectors, velocity, acceleration	150
24.4	Forces, moments, and free-body diagrams (2D)	151
24.5	Mass, center of mass, inertia (required by dynamics)	152
24.6	Newton/Euler laws of motion for <i>A</i> and <i>B</i> separately (inefficient)	152
24.6.1	Dynamics for a rigid body with a simple angular velocity (special 2D case)	152
24.6.2	Optional: Angular momentum principle (2D alternative to Section 24.6.1)	152
24.7	Equations of motion via MG road-maps/D’Alembert (efficient)	153
24.8	Matrix form of equations of motion (for solution, controls, . . .)	153
Homework		154
Homework 1:	Vectors (basis independent)	157
Homework 2:	Vector addition and dot/cross-products (with basis)	163
Homework 3:	Optional: Position vectors and geometry	171
Homework 4:	Vector bases and rotation matrices	175
Homework 5:	Vector differentiation	185
Homework 6:	Angular velocity and angular acceleration	193
Homework 7:	Velocity and acceleration	201
Homework 8:	Constraints	217
Homework 9:	Particle mass, translational/angular momentum, kinetic energy, etc.	223
Homework 10:	Moments and products of inertia, dynamic Celt (rattleback)	237
Homework 11:	Rigid bodies translational/angular momentum, kinetic energy, etc.	249
Homework 12:	Optional: Forces, force models, and statics	261
Homework 13:	Optional: Moments, torques (couples), and static equilibrium	269
Homework 14:	$\vec{F} = m\vec{a}$ and FBDs for translating mechanical systems	279
Homework 15:	$\vec{M} = \frac{d\vec{H}}{dt}$ and FBDs for rotating rigid bodies	285
Homework 16:	Optional: Power, work, and potential energy	297
Homework 17:	Optional: MIPS simulation project	305
Appendix:	Mass and geometry properties of common objects	307
Appendices and index		307
Appendix of constants	312
Summary of equations	313
Bibliography	318
